Common Initial Longitude Would Universal Convenience.

Peru is publishing the excellent results of her official surveys, henceforth her cartographic product will bring her into closer touch with most of the mapping of the world, because she has now adopted the Greenwich meridian. It will be a convenience to her own citizens, because they will be able to see more easily the graphical relations between their territory and that of other nations.

They will observe, for example, that the meridian of 75 degrees west is Greenwich, which divides their realm into two nearly equal areas east and west of it, is the same meridian that passes through Camden, N. J., just little east of Philadelphia, says New York Sun. The erroneous position widely prevalent that Peru lies west of the Atlantic coastal plain of the United States, though, in fact, is directly south of it.

Local pride the world over has been much geographical and navigational convenience and confusion. When the United States coast survey made its first chart of New York city in 1790, it referred to the city hall in New York as the initial meridian. It encountered profanity among ship masters who they need to use some foreign chart and find that France refer to the tower of St. Paul to San Fernando, and those of Portugal to Lisbon, a city is more than 10 degrees west of Greenwich. The international geographical congress last found it necessary to decide that the nations that cooperate in the production of charts of the world should refer to the meridian to Greenwich as the initial longitude would be the same for all nations, and that the nations will attach importance to this most of them have already done.

There are other variations in the making which might better be uniform. Many of the great maps use the meridian to indicate sizes and heights, while Great Britain and the United States use fathoms feet. There is no agreement as to the use of words expressing wind directions of information. This is particularly inconvenient for navigators, and it is necessary to have the charts of several nations in their chart room.

FIND OF INDIAN IDOLS

Gold Specimens From Costa Rica Smithsonian Institution.

That gold idols are to be found in the grave in Indian burying ground in Costa Rica was the report made by the Smithsonian Institution, in Washington, the other day by Emil Moesonyl, a young Austrian mining engineer. Mr. Moesonyl said he had been in Costa Rica for about seven years, and he had made a point of cultivating friendship of the Indians, he had been able to learn much of their tribal history and customs.

The golden idols, he said, are buried near the remains of the deceased, never in the graves. He explained the fact of the failure of local interest have already discovered the rich relics by the fact that the graves never marked, not even by an earthen mound. The idols, he said, are buried in the earth, generally a few feet distance from the graves.

Mr. Moesonyl had with him a few of the idols and several examples of Indian art and said he called at the Smithsonian Institution in an effort to interest the American scientists in possible exploration of the little known recesses of Central America.

RAISING ORANGES IN TEXAS

New Epoch in the Development of Bee County.

"The growing of oranges upon a commercial basis is marking a new epoch in the development of Bee County," said W. O. McCurdy of Bee County, Texas.

"Bee county is the home of the original Dugan orange. This tree, by the way, is now more than twenty years old. It is still bearing fruit, and it is the mother of more than 100 trees planted all the way from Florida to California. Oranges were grown until two years ago either for ornamental purposes or for the pleasure of having them, but now it is a business.

"Just a year or so ago an orange grower of California came to Bee County and after a thorough investigation the situation set out about 30,000 trees. Others have gone into the business tentatively, more than 100,000 trees having been set out last spring, some of which are bearing already.

"Every farmer in Bee county is raising oranges, having from a dozen to fifty and sometimes sixty trees to the place."

Carborundum, a wonderful product of the electric furnace, goes in sand, coke, sawdust and salt and comes out in clusters of beautiful crystals. Ground into powder, the product polishes and sharpens every kind of tool and even polishes diamonds.
